simple. smart.

Lingg  Janke

eco+

electronic manual operation

The eco+ product range by Lingg & Janke is convincing through its outstanding price-performance ratio. eco+ offers a wide range of KNX standard products like switching actuators, blind / shutter actuators and binary inputs.

The advantages and the high quality of Lingg & Janke products remain unchanged. For example the switching actuators are still ideally suited for switching capacitive loads with high switching currents (C-load) and the relays of the blind / shutter actuators are plunged, so they can be exchanged in case of malfunction.

The latest version of the switching and shutter actuators now include an electronic manual operation feature for easier commissioning.

KNX quick

Smart Metering

From now on most of the smart metering products are equipped with the new KNX quick technology. Thus, for the operator commissioning of electricity, gas, heat and water meters becomes as easy as never before.

Each meter obtains a group number (1...F) and a channel number (1...9). This results in a maximum amount of usable meters of 135. If you set all the coding switches of a quick device to 0, you may program the device via the ETS, as with all other KNX components. In quick mode all meters are sending their meter readings, and, depending on the type of the meter, instantaneous values like power, flow rate or temperature. Meter readings are transmitted to the KNX bus every 5 minutes, instantaneous values are sent cyclically every 15 to 30 seconds. FacilityWeb functions remain untouched and may still be used.

GWF water meteres

exact metering

The well-established GWFcoder®-system reads the absolute mechanical register value precisely and reliably and provides the data through standardized interfaces. The number wheels with three various long, asymmetrically arranged slots are being scanned through light pipes which are connected to five light emitting diodes (LED). Thus, the exact position of each number wheel can be detected and the encoded absolute register read can be transmitted. This functioning principle is patented by GWF. The GWFcoder®- interface provides an incomparably higher level of information compared to meters with pulse output.

GWF enhanced the reliable technology in its 2nd generation, so that 8 instead of 5 number wheels are being scanned and therefore a resolution of 1 liter is possible.

KNX standard devices

2. generation switching actuators and push button interfaces

The switching actuators of the eibSOLO and eibDUO professional series obtained a complete new ETS application, which offers a complete new range of use. In the new application 32 scenes per channel are programmable, an hour meter was added to each channel, and the time-, report- and lock-functions were totally revised. The well-known advantages and the high quality remain untouched, for example they are still ideally suited for switching capacitive loads with high inrush currents (C-load).

In addition of the improvements of the standard products, we also created some new devices. As of the 2nd quarter of 2016 the binary inputs get extended by 3 push button interfaces. These interfaces are ready-made with separate wire connectors, so they can easily be adapted to push buttons of other manufacturers.

All energy costs at a glance
simple. smart.

Electronic energy consultant

The visualization of all energy consumption data is of great importance for the acceptance of potential energy saving measures and changes in consumer behavior.

With KNX FacilityWeb by Lingg & Janke, all electricity, gas, oil, water and heat consumption data can be read out and visualized at any time. The Energy Analyzer from Lingg & Janke displays the data in the form of daily, weekly, monthly and annual evaluations. The consumer, house owner or real estate manager now has the possibility to analyze energy consumption continuously, introduce adequate energy saving measures or shift energy usage to off-peak periods. You can also use FacilityWeb to easily visualize and monitor the self-consumption or in-feed of renewable energy.

The Energy Analyzer NK-FW graphic

Transparency for the energy types electricity, gas, oil, water and heat

- Up to 8 meters per network coupler
- Storage of hourly values over a 10-year period

Graphical representation of daily, hourly, monthly and annual values

- MWh, kWh, m³ and liters
- Current day, week, month or year (and reference periods)

Presentation of costs (Euro)

- Multiplier per unit

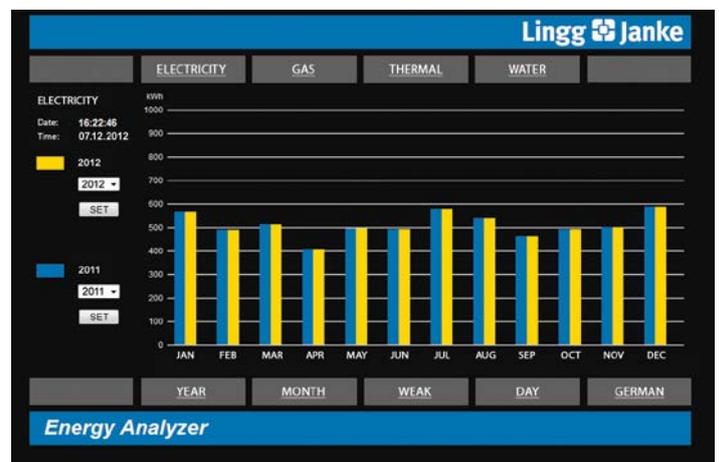

Visualization of 72 additional values

- 1-Bit, 1-Byte, 2-Byte and 4-Byte values

Easy KNX communication

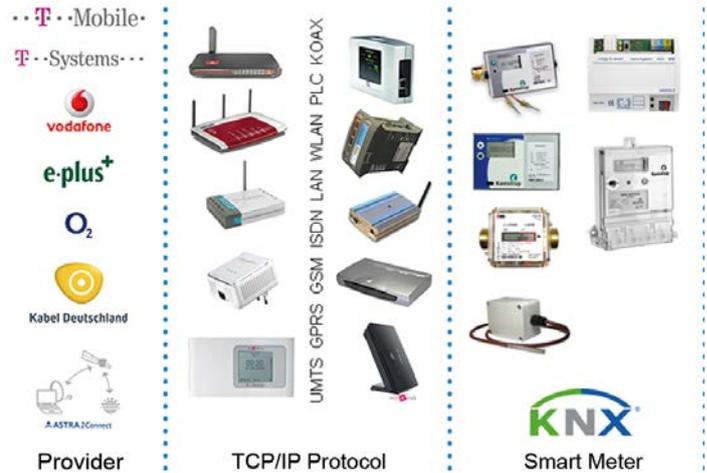

The NK-FW network couplers establish the interface to FacilityWeb devices. Via this interface, the data from the bus couplers of the KNX devices can be visualized directly with a web browser or made available for download using FacilityWeb technology. Transmission is based on the certified FTP over KNX protocol.

Connectivity

The NK-FW network coupler from Lingg & Janke connects the KNX installation bus to the Intranet/Internet. Communication with KNX bus devices can then be established with any standard web browser based on TCP/IP/FTP. The data may be transmitted over UMTS, GPRS, GSM, ISDN, LAN, WLAN, PLC or KOAX networks. It is therefore possible to read out the consumption data collected by electronic meters as well as switching states and sensor values. Due to the bidirectional communication capability of FacilityWeb, you can operate switches directly from the user interface of your web browser.

With FacilityWeb, you can initiate a variety of service and control tasks from any location - all you need is a PC with network connection and a web browser.

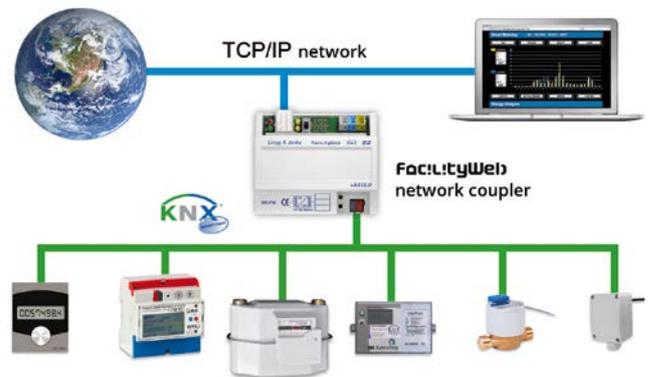

Via the FacilityWeb interface a multiplicity of meters can be connected to KNX, divisional and cross-vendor

Inhouse Smart Metering Web Portal

Smart meters provide consumption data for further processing. This information provides more transparency to the end user in his consumption behavior and supports the efficient use of energy.

For example, the current consumption data as well as the development of consumption are illustrated in a clear and user-friendly way via a web portal.

KNX Smart Metering from Lingg & Janke fulfills the requirements of data protection already today. Based on the worldwide standards, all consumption values can be displayed internally without detours via web browser and energy analyzer on a PC, SmartPhone, or tablet computer. The customer always retains control over his data and has all the current consumption data at a glance. Here, he can decide which data will be transmitted to external systems.

quick

KNX quite simply

The quick principle

The use of coding switches allow installations in small and medium-sized buildings even without the use of programming software.

The only tool you need is a screwdriver!

KNX parameterisation is already included in the devices and is selected through the coding switches.

The quick system is a wired KNX system. The wiring of the installation is carried out according to a standard KNX system. As with any KNX bus system, a power supply that supplies power to the devices connected to the bus is required.

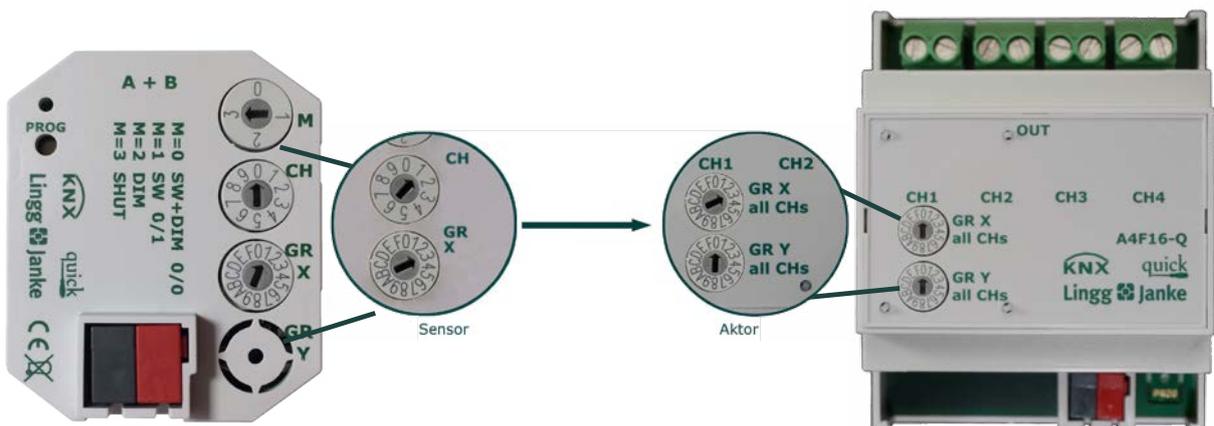

Programming is done using the coding switches located on each bus device. They are used to establish a connection between sensor and actuator by means of the same connection numbers. Actuators have multiple outputs to control the connected users (channels 1 to 9). That is why the connection number is composed of a channel number (CH) and a group number (GR).

All actuators have a second coding switch for a further group (GR Y). With this second group, all channels of the actuator – or individual channels – can be activated by a second sensor with a different group number.

In addition, there is a coding switch on the sensors that provides them with information on the type of actuators to be activated.

The number of groups is limited to 15 per actuator type (switching, blinds/ shutters, dimmer). An actuator can have up to 9 channels. This results in a maximum number of usable channels of 135 for switching, 90 for blind control, and 60 for dimming. The capability of the power supply used should always be considered.

The quick system allows a lot of comfort without programming effort. But if you wish, all quick products may be programmed with ETS. In doing so you may decide whether all devices are programmed or just a few, because quick is 100 % KNX.

Operating modes of the push button interfaces and binary inputs

The variety of push button interfaces and binary inputs offers a maximum of flexibility, depending on the functions and programming effort you require.

push button interface with single button operation

switching	0	switching and dimming 0 (central off)
	1	rising edge switch 0
	2	rising edge switch 1
	3	rising edge switch 0-1
	4	rising edge switch 0, rising edge switch 1

push button interface with rocker function

0	switching and dimming 0 (central off)
1	switching on / off
2	dimming
3	shutter / blinds

quick Smart Metering

In addition to standard functions like switching, dimming and sun shading devices, smart metering solutions are available with KNX quick. Measuring of consumption never had been this easy. The meters just need to be built in and the coding switches need to be set, literally like „plug and play“.

Each meter receives a group number (1...F) and a channel number (1...9). This results in a maximum amount of usable meters of 135. If you set all the coding switches of a quick device to 0, you may program the device via the ETS, as with all other KNX components. In quick mode all meters are sending their meter readings, and, depending on the type of the meter instantaneous values like power, flow rate or temperature. The meter readings are transmitted to the KNX bus every 5 minutes, instantaneous values are sent cyclically every 15 to 30 seconds. Facility Web functions remain untouched and may still be used.

To display measured results, various software packages may be used, for example Callidomus, ELVIS, IP Symcon or many others. In these packages group numbers are already preset and may be used easily. Additionally the network coupler is available in a "quick" version. It offers a fast and easy way to show meter readings.

KNX FacilityWeb System devices

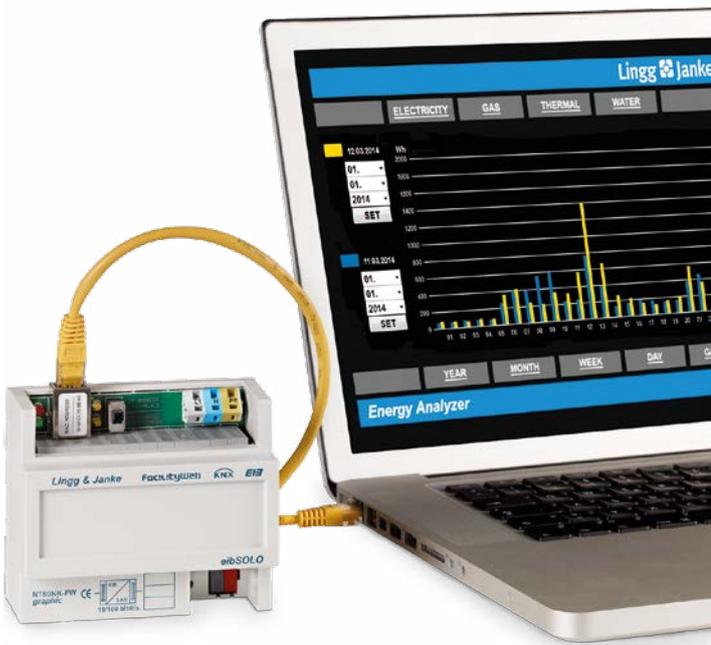

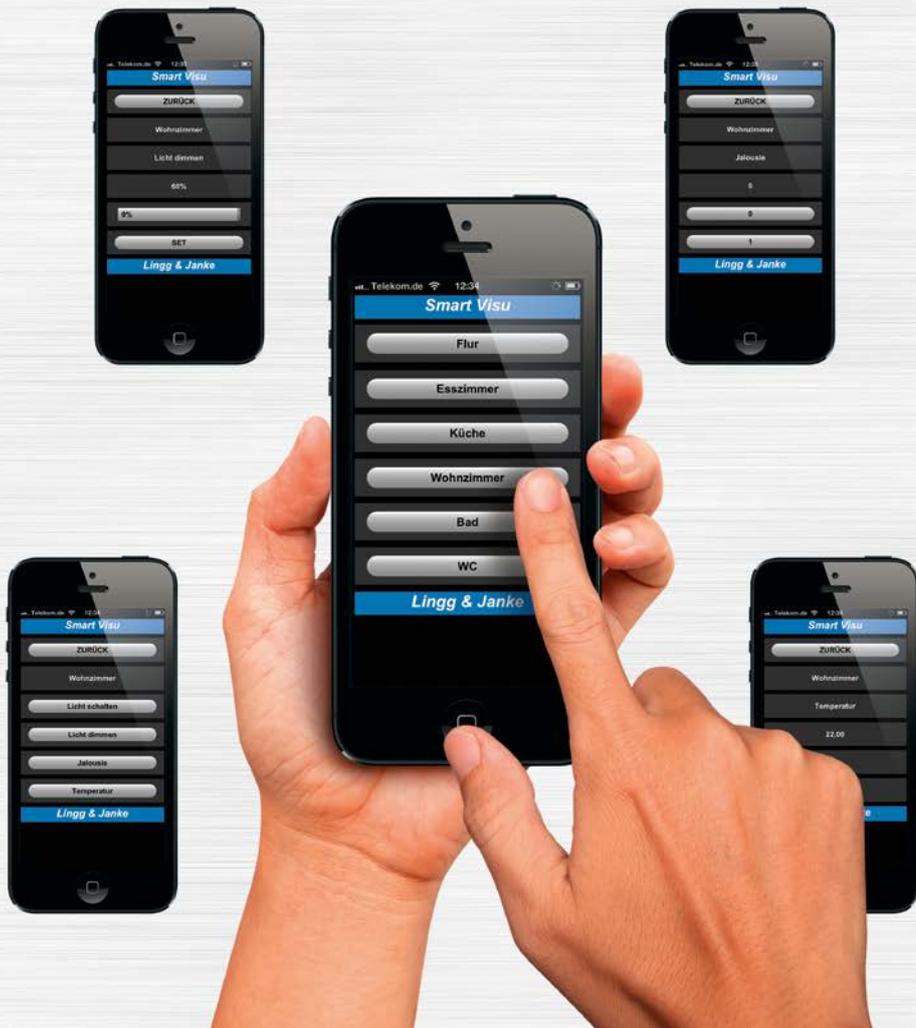

FacilityWeb is a registered trademark of Lingg & Janke. FacilityWeb KNX devices additionally operate with the protocol „FTP over KNX“. Every KNX bus device has its own website. The user can look into the bus devices using a web browser and directly download data from the bus device. Due to the bidirectional communication capability of FacilityWeb, you can operate switches and set values directly from the user interface of your web browser.

Per KNX system only one network coupler FW is necessary to connect the KNX bus to an IP network.

The advantages:

- low power consumption of only 150 mW per bus coupler
- low-cost bus coupler
- Functions almost like „big“ web servers
- low start-up costs, since all functions ready
- little planning effort
- each bus device has its own website
- no additional software required for the end user

Apple mobile Web App „Smart Visu“

Remote operation of building services equipment – comfortably from your iPhone or iPad. The KNX network coupler NK-FW graphic now offers a variety of additional possibilities using the „Smart Visu“ Apple mobile Web App. „Smart Visu“ allows you to control and visualize functions and states from virtually any location.

The Web App. is included in the NK-FW graphic and is directly installed from this device.

FacilityWeb network coupler

- provides all FacilityWeb functions like TCP/IP access, FTP access for KNX bus devices.
- integrated websurface for displaying of up to 20 metering data
- graphical presentation of up to 8 meters in a bar diagram
 - bar diagram for day/ week/ month and year
 - comparison / summary of 2 days / weeks / months / years
 - display of consumption data / feed-in and cost / earnings, today / yesterday, this week / last week, this year / last year
- records up to 8 meter readings hourly for 10 years
- interface for the websurfaces of the FacilityWeb devices
- also available with integrated power supply with 80 mA (small KNX arrangement, max. 5 devices)
- REG devices with 6 division units
- quick-Version: handles meters in group 1, channels 1 to 8.

KNX FacilityWeb electrical energy meters

Lingg & Janke's electricity meters are direct connected or current transformer single phase or three phase meters for up to four quadrant measurement and one or two directions.

The meters' display shows the respective values (meter reading, instantaneous power, etc.).

The KNX/EIB module stores the measured data every 15 minutes over a period of one year and provides full FacilityWeb capability.

Every meter has its own home page. The meter readings can be read out directly via a network coupler using a standard internet browser, or read out for further processing and billing purposes using TCP/IP. Consistent communication based on the TCP/IP and KNX protocol is the key to fast and costeffective acquisition of operating and energy consumption data.

- complete FacilityWeb functionality in connection with NK-FW
- integrated data logging for 1 year
- TCP/IP-Protocol, dedicated homepage
- MID conformity approved

eHZ KNX interface and direct reading KNX interface

The EHZ KNX interface consists of an optical reading head with RS232 connector and a 3 RU DIN RAIL unit containing the KNX bus coupler. The various protocols of the EHZ manufacturers are read via the optical customer interface on the front side of the meter.

Depending on the protocol provided by the manufacturer, meter readings such as T1/T2 values, A+ / A- values and power, voltage and current values can be read out.

The KNX/EIB module stores the measured data at 15-minute intervals over a period of one year and provides full FacilityWeb capability.

Every meter has its own web page. Via a network coupler it is possible to read out meter readings with a standard web browser.

eHZ KNX interface (also for 3.HZ energy meters)

- complete Facility Web functionality (via NK-FW)
- low energy consumption
- integrated data logger with storage capacity for one year's consumption data, ETS configurable
- HTTP protocol
- adds **quick**-ability as of the 2. quarter 2016

KNX FacilityWeb heat meters

KNX heat meters from Lingg & Janke are characterised by high accuracy and long term stability. An electronic display allows the read out of meter readings and instantaneous values on site.

The integrated KNX data logger stores the data at 15 minute intervals over a period of one year. The data can be read out directly via a NK-FW network coupler using a standard internet browser.

- complete Facility Web functionality via NK-FW
- integrated data logging for 1-year
- TCP/IP-protocol
- MID conformity approved

KNX FacilityWeb heat meters

Hydrometer Sharky Heat

- heat meter with multi-jet flow sensor
- including KNX-interface in separate, wall mounted box, with FacilityWeb
- adds **quick**-ability as of the 2. quarter 2016
- Prices including calibration fee

nominal flow	DN	length	thread	mount.	temp.	order-no.
Qn= 0,6 m³/h	DN15	110 mm	G3/4	s. manuf.	5-130°C	84001
Qn= 1,5 m³/h	DN15	110 mm	G3/4	s. manuf.	5-130°C	84002
Qn= 2,5 m³/h	DN20	130 mm	G1	s. manuf.	5-130°C	84003
KNX interface für Sharky Heat						87967

Engelmann Sensostar 2

- heat meter with multi-jet flow sensor
- including KNX-interface in separate, wall mounted box, with FacilityWeb
- update cycle time 5 minutes
- adds **quick**-ability as of the 2. quarter 2016
- Prices including calibration fee / other dimensions on request

nominal flow	DN	length	thread	mount.	temp.	order-no.
Qn= 0,6 m³/h	DN15	110 mm	G3/4	s. manuf.	15-90°C	84301

Qn= 2,5 m³/h	DN20	130 mm	G1	s. manuf.	15-90°C	84303
BCU-WMZ-ENG-SST2-C-FW KNX interface for Engelmann SensoStar2						87964

Engelmann Sensostar 2C

- heat meter with multi-jet flow sensor
- including KNX-interface in separate, wall mounted box, with FacilityWeb
- update cycle time 5 minutes
- adds **quick**-ability as of the 2. quarter 2016
- Prices including calibration fee / other dimensions on request

nominal flow	DN	length	thread	mount.	temp.	order-no.
Qn= 0,6 m³/h	DN15	110 mm	G3/4	s. manuf.	15-90°C	84304
Qn= 1,5 m³/h	DN15	110 mm	G3/4	s. manuf.	15-90°C	84305
Qn= 2,5 m³/h	DN20	130 mm	G1	s. manuf.	15-90°C	84306
BCU-WMZ-ENG-SST2-C-FW KNX interface for Engelmann SensoStar2C						87965

Kamstrup heat meter or all-purpose meters (heat + cooling)

- heat meter with ultrasonic flow sensor
- as well as all-purpose meters (heat meter with incl. cooling register)
- 2 direct temperature sensors PT500 with 1,5m cable
- 230V main supply
- including integrated KNX-interface
- with FacilityWeb functionality
- adds **quick**-ability as of the 2. quarter 2016
- Prices including calibration fee / other dimensions on request

5/4	3,5 - 6 m³/h	25	5/4	260 mm	85983

KNX FacilityWeb water meters

Lingg & Janke cold / hot water metering solutions are based on water meters of the manufacturers Andrae, Hydrometer, Kamstrup, Engelmann and Sensus for which we provide the appropriate KNX FacilityWeb interfaces.

All KNX water meters offer:

- full FacilityWeb functionality in connection with NK-FW
- integrated data logging for 1-year
- TCP/IP protocol
- MID conformity approved

KNX FacilityWeb Gas meters

KNX diaphragm gas meters distributed by Lingg & Janke have as a basis the counters of the manufacturers Elster and Itron. The appropriate KNX interface is produced by Lingg & Janke.

All KNX gas meters offer:

- full FacilityWeb functionality in connection with NK-FW
- integrated data logging for 1-year
- TCP/IP protocol
- MID conformity approved

KNX FacilityWeb Oil meters

The oil meter are characterised by high measurement accuracy and long-term stability. The KNX module stores the measured data at 15-minute intervals over a period of one year and provides full FacilityWeb capability. The data can be read out directly via a NK-FW network coupler using a standard internet browser.

The KNX Braun oil meters offer:

- full FacilityWeb functionality in connection with NK-FW
- integrated data logging for 1-year
- TCP/IP protocol (via NK-FW)
- MID conformity approved

Braun oil meter HZ 3

KNX FacilityWeb temperature sensors

The DIGITEMP series of temperature sensors are capable of measuring temperature and humidity (RTFF10-FW only) in different environments. Four thresholds are provided for further data processing on the KNX bus.

The KNX temperature sensors have:

- complete Facility Web functionality (via NK-FW)
- integrated data logger with storage capacity for one year
- TCP/IP protocol

DIGITEMP temperature sensor

- complete FacilityWeb functionality (via NK-FW)
- including integrated KNX bus coupler
- integrated data logger for temperature thresholds, status
- thresholds / adjustable setpoints via browser
- temperature range -55 ... +125°C
- 4 independent thresholds
- TCP/IP-protocol, dedicated homepage (via NK-FW)
- adds **quick**-ability as of the 2. quarter 2016
- immersion sleeve and mounting accessories on request

KNX Switches

KNX switches by Lingg & Janke comprise a main module with KNX bus coupling unit. Up to three extension modules, connected by prefabricated cables, open out the functional range of the KNX switch main module. As many as 16 switching functions can thus be implemented without great expense, using just one bus coupling unit.

Both, main and extension modules, can accommodate single or double rocker switches. The rockers are designed as push buttons with neutral position so that they can provide different switching functions, such as ON/OFF, dimmer or blinds control.

In the ETS application software, you always go through the same steps when setting the module parameters, be it the main module or the extension module. For every module you decide whether the switch function is to be implemented by a rocker switch action or a single-key push button action. The switch action itself can be an ON/OFF or dimmer operation, lower blinds or scenario control, or a value setting function.

KNX quick

Lingg & Janke's quick system lives up to its name:

The use of coding switches allows installations in small and medium-sized buildings even without the use of programming software.

The only tool you need is a screwdriver!

KNX parametrisation is already included in the devices and is selected through the coding switch.

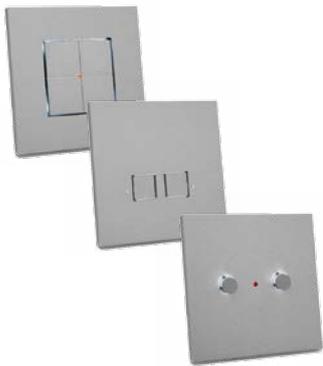

quick's technology is based on the internationally recognised KNX standard, which, if desired, can open up a wide range of programming and combination possibilities.

push button sensor module with system connector

KNX Actuators

The Lingg & Janke KNX 4-gang universal dimmer can be used for all common dimmable light sources, including energy saving and LED retrofit lamps. It offers the operating modes universal, leading-edge and trailing-edge control.

All four channels are 100 percent short-circuit proof. In addition, each channel has its own integrated energy consumption meter that can read out active energy, active power, voltage (V_{rms}) and current (I_{rms}) values. The data format is the same as for the Lingg & Janke energy meters. The dimmer provides full FacilityWeb capability and has its own homepage.

The switching actuators of the eibSOLO and eibDUO professional series obtained a complete new ETS application, which offers a complete new range of use. In the new application 32 scenes per channel are programmable, an hour meter was added to each channel, and the time-, report- and lock-functions were totally revised. The well-known advantages and the high quality remain untouched, for example they are still ideally suited for switching capacitive loads with high inrush currents (C-load).

Universal dimming actuator 4 x 2,5A

- 100% short-circuit proof
- for all dimmable light sources
- can be used for dimmable LED retrofit lamps
- can be used for dimmable energy saving lamps
- flicker-free dimming range 0-100%
- each channel has its own integrated energy consumption meter
- can read out active energy, active power, voltage (Vrms) and current (Irms) values for each channel
- 32 scenes per channel
- energy, power, voltage and current logging
- complete FacilityWeb functionality

eco+

The eco+ product range by Lingg & Janke is convincing through its outstanding price-performance ratio. eco+ offers a wide range of KNX standard products like switching actuators, blind / shutter actuators and binary inputs.

The advantages and the high quality of Lingg & Janke products remain unchanged. For example the switching actuators are still ideally suited for switching capacitive loads with high switching currents (C-load) and the relays of the blind / shutter actuators are plunged, so they can be exchanged in case of malfunction.

The latest version of the switching and shutter actuators now include an electronic manual operation feature for easier commissioning.

Switching actuator

- 2, 4, 6 oder 9 chanel
- electronic manual operation
- switching capacity 16 A with 250 V AC
- suitable for C-load

KNX binary inputs, system devices, accessories

The KNX binary inputs (BE9F24/BE9F230) can generate bus telegrams on 9 independent channels. For each channel, an LED indicates the state of the signal, even without bus voltage. Comprehensive application software allows each channel to be parametrized individually. A counting feature complements the switching, dimming, shutter control and value feature of the binary input. The switching feature can generate two separate telegrams. Each channel is connected to a screwless terminal.

The power supply unit provides the system power necessary for the bus system. The integrated choke prevents the data telegrams from short-circuiting on the bus line.

The connection to the bus line is established by clicking the device onto the DIN-RAIL (installed data-rail) or by using the bus connection terminal (red-black) on the front side.

Binary input (9-gang)

- 9 independent inputs
- the signal voltage for each channel may be between 8V...48V and 180V...250V AC or DC
- for each channel, an LED indicates the state of the signal
- the switching feature can generate two separate telegrams

Design Wall-mounting frame

The wall-mounting frames of the smart-frame series allow easy installation of tablets / smartphones on the wall. In consequence of the magnetic coupling of the frame no holes or fasteners such as screws are visible. The frames are made of colored acrylic glass with a gloss finish and matte sides. Due to the reduced revolving edge the frame looks very flat. For the supply of the devices an optional adapter for installation in a 55 mm flush-mounting box is available.

For the iPod Touch a switch box is sufficient for assembly, no further drilling is required. An appropriate support ring is included. For the larger frames (for iPad, Samsung Tablets etc.) 4 wall-mounting holes are required. A template for this purpose and the necessary mounting hardware is included.

Design wall frame Apple

- fits into built-in-boxes
- magnetic mounting on 4 wall screws

Control with FacilityWeb

The availability of load-varying tariff or time-of-use rates in the future will be an incentive for customers to reduce the peak energy consumption of their consumers and maximize energy-saving potential. With FacilityWeb, household appliances such as water heaters, washing machines, dish washers or freezers can be linked with the electronic meter.

Consumers and building equipment can be switched on/off according to the temperature information, window position and current performance data provided through the KNX network - both from a central point or from any location at any time via web browser or Smartphone.

FacilityWeb®

FacilityWeb is a registered trademark of Lingg & Janke. It provides highly effective functions for measuring, visualizing and controlling the consumption of different energy sources via Intranet or Internet. Commissioning engineers, house owners or real estate managers are now able to obtain operational information or meter readings of the devices from any location via Intranet/Internet and implement energy saving measures while the individual systems are operating.

KNX Smart Metering Lingg & Janke KNX Smart Metering is distinguished by the low energy consumption of the employed KNX bus couplers. With a power consumption of 0.2 Watt only, FacilityWeb offers a high degree of energy efficiency for smart metering applications. Facility-Web products put minimal strain on the environment.

Based on the open standard „FTP over KNX“, efficient smart meter solutions for consumption measurement and analysis can be easily implemented to monitor energy usage and control energy costs.

Lingg & Janke supplies innovative products and system solutions for more efficiency, security and installation flexibility in both residential and commercial buildings.

Lingg & Janke KNX Smart Metering comprises branch and manufacturer independent universal solutions for the integration of a wide variety of meter types.

- complete FacilityWeb functionality
- low energy consumption
- Data logger with storage capacity for one year's consumption data
- TCP/IP protocol
